

CEWELD NiCrCo 617 Tig

TYPE Nickel based alloy with high heat resistance combined with excellent mechanical strength

APPLICATIONS CEWELD NiCrCo 617 is a high temperature alloy which is used for welding of nickel-chromium-cobalt-molybdenum alloys (UNS Number N06617). This filler metal can also be used for overlay cladding where similar alloy is required such as gas turbines and ethylene equipment.

PROPERTIES Weld metal provides optimum strength and oxidation resistance above 816°C (1500°) up to 1149°F (2100°F), especially when welding on base metals of nickel-iron-chromium alloys.
