

CEWELD OA WC2 Ni

TYPE Fluxcored hardfacing welding wire with Nickel-Boron-Silicon matrix and 45-55% Tungsten carbides (FTC)

APPLICATIONS This Ni-based alloy provides an excellent corrosion resistance combined with extreme abrasion resistance. OA WC2 (Ni) can be applied on all sorts of steels except on cast iron or Mn-steel. This alloy is the most wear resistant type in most hardfacing applications. In case of very fine dust abrasion It might happen that the matrix will be washed out and loses the imbedded Tungsten carbides, in this case another hardfacing product should be considered.

PROPERTIES 2360 HV nickel based corrosion resistant hardfacing alloy containing 45-55% tungsten carbides. OA WC2 (Ni) has excellent flow and wetting characteristics. Multi-layer deposits are possible and worn parts can be rebuild without removing the old material. Fused Tungsten Carbides will guaranty a long life for several wear applications. Best to be used with shielding gas M21 (80%Ar/20%Co2) 12 - 18 litres per minute.

CLASSIFICATION EN ISO 14700: T Ni20
DIN 8555: MF 21-GF-55-CGTZ

SUITABLE FOR Rebuilding of stabilisers and other oilfield tools where maximum protection is required. Also for augers, impellers, mixer plates in the brick and clay industry and on decanter screws or hardfacing deep drilling equipment.
